Product Overview

Composition (per tablet):

Tolperisone Hydrochloride I.P.

150 mg

Centrally acting muscle relaxant

Etodolac I.P.

400 mg

Potent anti-inflammatory agent

Key Features:

- **Etodolac** → potent analgesic & anti-inflammatory with preferential COX-2 inhibition (better GI safety)
- **Tolperisone** → centrally acting muscle relaxant, non-sedative
- Together → pain relief + spasm relaxation + functional mobility

Understanding the dual therapeutic approach in orthopaedic care

Preferential COX-2 inhibitor → reduces prostaglandins → ↓ inflammation & pain

Stabilises nerve membranes, inhibits abnormal reflex transmission → reduces painful muscle spasms without sedation

Potent anti-inflammatory + muscle relaxation + improved mobility

Indications in Orthopaedics

Tracfast-TP is recommended for comprehensive musculoskeletal care:

Low Back Pain & Lumbar Spondylosis

Effective relief for chronic lower back conditions with associated muscle spasm

Sciatica & Radiculopathy with Spasm

Comprehensive management of nerve pain with muscle involvement

Osteoarthritis with Painful Spasm

Dual action for degenerative joint disease complications

Cervical Spondylosis with Stiffness

Targeted treatment for neck pain and restricted cervical mobility

Post-Traumatic Musculoskeletal Pain

Recovery support for trauma-related pain and stiffness

Post-Operative Spasm & Restricted Mobility

Enhanced recovery following orthopaedic surgical procedures

Clinical Advantages

Why Orthopaedic Patients Benefit:

Dual Benefit

Pain relief + spasm control in a single formulation

Non-Sedative Relaxant

Patients remain **active & alert** during treatment

Reduced NSAID Requirements

Minimises **NSAID dose requirement** & side effects

Enhanced Rehabilitation

Improves **rehabilitation & physiotherapy compliance**

Superior Safety Profile

Better safety vs diclofenac + sedative relaxant combinations

Comparison with Other Orthopaedic Combinations

Comprehensive analysis of therapeutic options in musculoskeletal care

Parameter	Tracfast-TP (Etodolac+Tolperisone)	Diclofenac+Chlorzoxazone	NSAID Alone
Pain Relief	✓ Strong	✓ Strong	✓ Strong
Inflammation Control	✓ Potent	✓ Moderate	✓ Potent
Muscle Spasm Relief	✓ Yes (Non-sedative)	✓ Yes (Sedative)	✗ No
Sedation / Drowsiness	✗ None	⚠ Common	✗ None
GI Safety	✓ Better (Etodolac advantage)	⚠ Risk	⚠ Risk

Dosage & Administration

Recommended in Orthopaedic Patients:

1 Tablet twice daily after meals

Duration: Short-term in acute painful spasm, extend as required under supervision

Clinical Notes:

- Shift to monotherapy (Etodolac alone) once spasm resolves
- Avoid alcohol & sedatives (though tolperisone is non-sedative, caution is advised)
- Monitor patient response and adjust duration accordingly

01

Initial Assessment

Evaluate pain and spasm severity

02

Start Therapy

1 tablet twice daily after meals

03

Monitor Progress

Assess pain relief and mobility improvement

04

Adjust Treatment

Consider monotherapy when spasm resolves

Safety & Tolerability

✓ Well-Tolerated Profile:

- **Etodolac** → better gastric safety vs diclofenac/ibuprofen
- **Tolperisone** → minimal CNS side effects, non-sedative

✗ Clinical Cautions:

- Avoid in severe hepatic/renal impairment
- Not recommended in pregnancy & lactation
- Use cautiously in elderly & cardiac patients

Pre-Treatment

Assess patient history, hepatic/renal function, and contraindications

1

2

3

Follow-Up

Regular assessment of efficacy and any adverse reactions

During Treatment

Monitor for GI symptoms, CNS effects, and therapeutic response

Why Orthopaedic Surgeons & Physicians Prescribe Tracfast-TP

The trusted choice for comprehensive musculoskeletal care

Acute & Chronic Pain

Effective for both acute episodes and chronic orthopaedic conditions with spasm

Trusted Formulation

Reliable Human Orthocare dual-action formulation

Faster Recovery

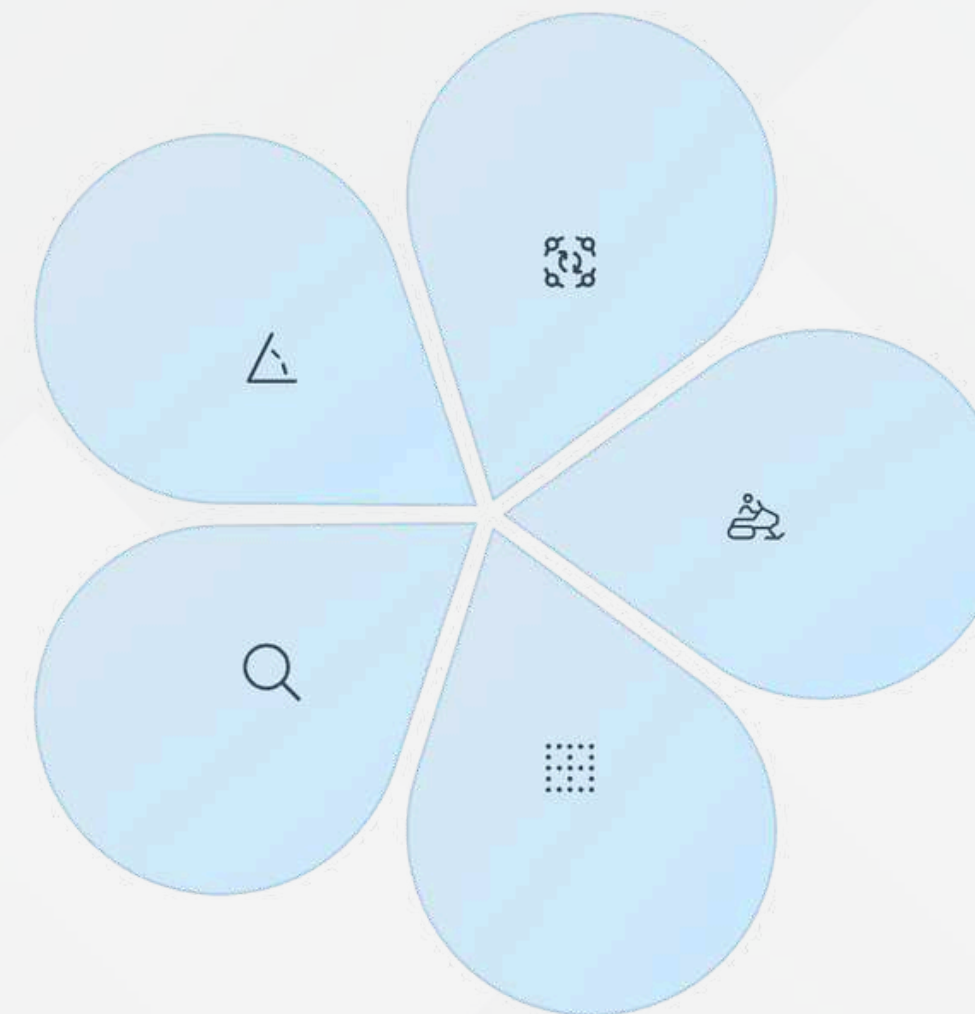

Accelerated healing in **spondylosis, sciatica & radiculopathy**

Enhanced Mobility

Improves mobility & rehabilitation compliance significantly

Non-Sedative Advantage

Clear advantage over other relaxant combinations

"The combination of etodolac and tolperisone provides comprehensive management of musculoskeletal conditions, addressing both pain and spasm without compromising patient alertness."
